

How to update Software/Image

How to for all GigaBlue STB's with a LCD
(HD Ultra UE, UHD UE 4K, UHD QUAD 4K)

1. Format your USB Flash drive with FAT32
2. Download latest Image for your device here:
<http://www.gigablue.de/sales-support/image-bootloader/>
(ihere for UHD Quad 4K)
3. Extract the gigablue folder to an empty FAT32 flash drive (here with WinRAR)

4. Now you have following structure on you flash drive
/gigablue/quad4k/
5. Turn off your GigaBlue STB (Use Powerswitch on back side)
6. Remove all USB Drives/ CI-Module/ SmartCards on your STB
7. Plug in you Flash drive on front or back side
8. Turn on your GigaBlue

9. If you see following picture on your device, than press Power Button on your STB

10. After flashing is complete, it will be start up automatically and you can remove your flash drive
11. Now the installation wizard will be appear. Otherwise you have to do all steps again
